

As a data scientist working for an investment firm, you will extract the revenue data for Tesla and GameStop and build a dashboard to compare the price of the stock vs the revenue.

Grading Criteria Overview

Full Points: Working code that yields correct results

You will be graded on the dashboards displaying the specified data. There are 12 possible points for this assignment. Here is the breakdown:

There are 12 possible points for this assignment. Here is the breakdown:

Question 1 - Extracting Tesla Stock Data Using yfinance - 2 Points

Question 2 - Extracting Tesla Revenue Data Using Webscraping - 1 Points

Question 3 - Extracting GameStop Stock Data Using yfinance - 2 Points

Question 4 - Extracting GameStop Revenue Data Using Webscraping - 1 Points

Question 5 - Tesla Stock and Revenue Dashboard - 2 Points

Question 6 - GameStop Stock and Revenue Dashboard- 2 Points

Question 7 - Sharing your Assignment Notebook - 2 Points

For each problem points will be awarded as follows:

Full Points: Working code that yields correct results

Partial Points: Partially correct code or results

No Points: Did not attempt the problem or did not upload any solution

Example Submissions

Here are some examples of a submission clearly showing both the Code and its Results/Output when executed from a Jupyter Notebook.

Question 1: Use the yfinance to Extract Stock Data

Using the `Ticker` function enter the ticker symbol of the stock we want to extract data on to create a ticker object. The stock is Shopify and its ticker symbol is `SHOP`.

```
shopify = yf.Ticker("SHOP")
```

Using the ticker object and the function `history` extract stock information and save it in a dataframe named `shopify_data`. Set the `period` parameter to `max` so we get information for the maximum amount of time.

```
shopify_data = shopify.history(period="max")
```

Reset the index, save, and display the first five rows of the `shopify_data` dataframe using the `head` function. Take a screenshot of the results.

```
shopify_data.reset_index(inplace=True)  
shopify_data.head()
```

	Date	Open	High	Low	Close	Volume	Dividends	Stock Splits
0	2015-05-20	17.000000	17.000000	17.000000	17.000000	0	0	0
1	2015-05-21	28.000000	28.740000	24.110001	25.680000	12303900	0	0
2	2015-05-22	26.070000	31.100000	26.000000	28.309999	2841200	0	0
3	2015-05-26	29.799999	30.340000	29.080000	29.650000	820200	0	0
4	2015-05-27	30.670000	30.809999	27.000000	27.500000	797600	0	0
